

Coding Assignment

Create a webpage that displays 10 random Hacker News stories using the Hacker News API. The stories must be listed in ascending order based on the stories score.

The UI must include:

- Story title
- Story URL
- Story timestamp
- Story score
- Author id
- Author karma score
- A dummy image (not from API – just a static asset)

Hint: You'll be needing the following endpoints:

- Top stories: <https://hacker-news.firebaseio.com/v0/topstories.json>
- Story item: [https://hacker-news.firebaseio.com/v0/item/\\${id}.json](https://hacker-news.firebaseio.com/v0/item/${id}.json)
- User: [https://hacker-news.firebaseio.com/v0/user/\\${id}.json](https://hacker-news.firebaseio.com/v0/user/${id}.json)
- API documentation: <https://github.com/HackerNews/API>

Requirements:

- UI must be responsive
- CSS must be compiled with a preprocessor
- Do *not* use a UI library or CSS framework

Bonus Points:

- Visual eye-candy and user experience
- Use a modern Javascript framework
- Use Typescript
